

Just **how fast**  
do you want to go?

Knology offers two cutting-edge fiber-based data application options. Pure fiber for uncompromised capability and boundless capacity for medium-to-large businesses. And hybrid-fiber for an economical alternative that meets the high-speed data needs of small businesses.

**Unlimited speed. Boundless capacity. It simply doesn't get any better than this.**

#### **FIBER-BASED DATA for medium-to-large businesses**

Dedicated, always on and with speeds up to 1 Gbps, data over fiber from Knology is the reliable blazing hot solution for your business. Compare the speed, scalability, security, customer service and savings of fiber from Knology to any T-1 service and you'll see how easy the choice is. Plus, our fiber offerings include metro-ethernet services to connect multiple office locations, so there truly is nothing stopping you from going full-speed with fiber.

#### **Why Choose Fiber from Knology?**

**Speed** – It's virtually unlimited. Unlike a T-1, fiber has boundless possibilities and a lot fewer hassles.

**Scalability** – A single connection is all you need. Upgrades can be accomplished remotely in 1 Mbps increments, without interruption to your business processes.

**Security** – We own our network all the way into your business locations – eliminating the middleman. Should a connection problem arise, we are on it until it's solved.

**Savings** – Cost is reduced because there is no equipment to buy or lease at installation, and no equipment to buy or lease when you're ready to upgrade.

**Customer Care** – Our installation and technical support teams are local. They're also available to you anytime you need them – including nights and weekends.

**The power of fiber is now within your reach.**

#### **HYBRID-FIBER BASED DATA for small businesses**

Say goodbye to slow connections and hello to fiber. Knology's hybrid-fiber based data is the cost-effective, reliable way to keep your company connected. Simply plug a single Ethernet connection directly into your router, and you're ready to go. Our hybrid-fiber connection delivers the speed and power your business demands and includes e-mail, spam filtering and other optional features such as static IP addresses.

Don't wait, let Knology put the power of fiber connectivity in your business' hands, without putting a major stress on your budget.
